EDUCATION RESEARCH EVENTS NEWS CONTACT

Minor: Re-imagining tomorrow through arts & sciences

- How can we learn to approach the complex issues of the 21st century (such as the waste problem, climate crisis, global poverty, etc.)? These issues are of such a different size, complexity, and scale, that dealing with them has to contend with methods, attitudes, and expertise that transcend disciplinary confinements.
- Alternative futures have to be imagined and visualized, and this can only be achieved through the combination and validation of different bits of knowledge (societal, artistic, academic), through which we can start to create, to re-imagine, and to decompose and recompose.
